If the Z83-F you purchased is normally shut down, the RJ45 network port cannot be recognized when it is turned on again, but it can be recognized again after plugging in or unplugging the power source. Please follow the steps below to set up (Wake on LAN is also supported)

1. Right click to 'start' and select 'device manager'

Apps and Features	
Mobility Center	
Power Options	
Event Viewer	
System	
Device Manager	
Network Connections	
Disk Management	
Computer Management	
Windows PowerShell	
Windows PowerShell (Admin)	
Task Manager	
Settings	
File Explorer	
Search	
Run	
Shut down or sign out	
Desktop Start	
📒 🔎 Type here to search	

2. Right click on 'realtek PCIe GbE Family Controller' and select ' Properties'

3. Click 'Advanced' , and change the value of the 'shutdown Wake-

On-Lan' option to Enabled. Then click 'OK' to save.
